

# HeraGel® Studio ONE

# HeraGel® Studio ONE

40 years after Kulzer first developed and produced UV gels, we were able to create the unique line **HeraGel Studio ONE** with products right for the studio.

**HeraGel Studio ONE** is the result of decades of expertise in UV gels. You and your customers will benefit from our experience.

**Natural appearance is in the foreground**

“HeraGel Studio ONE“ sets with the colors “clear“, “rosé“, “rosé opaque“ and “classic“ for a natural look. The finished modeling impresses with its longevity without lifting and a feel that mimics the natural nail.

**Sustainability**

“HeraGel Studio ONE” impresses with its natural look and is absolutely wholesome. The formulation from the most modern raw materials is HEMA-free and vegan. For setting the thixotropy we use sustainable, natural raw materials. The pigmentation from medically approved colors guarantees absolute color stability.

**Viscosity**

The balanced medium viscosity inspires both – the absolute nail design professionals as well as beginners.

**Processing**

The direct application without the need for a primer or adhesive gel promises efficient work for all modeling techniques. “HeraGel Studio ONE“ is temperature reduced in 90 seconds polymerized in LED devices.

**Assortment**

In addition to the builder and a fashion color, a glossy Topcoat completes the product range.

**KULZER**
